Introduction.

This is the first book on implementing financial models using object-oriented C++.

Assuming only a basic knowledge of C++ and mathematical finance, the reader learns how to produce well-designed, structured, reusable code via carefully-chosen examples.

This course covers the design patterns and implementation of financial models using object oriented programming in C++. It discusses advanced applications on quantitative finance with special emphasis on derivatives pricing and their calculations using commonly known formulas such as the Black-Scholes and lattice models.

Strategy; Observer;
Reactor; Also: I always
think of goto as a great
poor man's tool for the
decorator pattern..

Update: I'd highly
recommend using Rust
(rust-lang.org) rather
than C except where
you are required to use
c. Rust has all of the
benefits of c, including
speed and binary
library compatibility
with ...
