Construction grammar is a sociobiological family of theories within the field of cognitive and evolutionary linguistics. These posit that human language consists of constructions, or learned pairings of linguistic forms with meanings. Constructions correspond to replicators or memes in memetics and other cultural replicator theories. The term 'construction' replaces a number of concepts from linguistics including words, morphemes, fixed expressions and idioms, and abstract grammatical rules such

Abstract Phrasal and Clausal Constructions - Oxford Handbooks

This chapter highlights the fundamental assumptions shared by all constructionist approaches, distinguishing them from mainstream generative grammar. In particular, phrasal constructions, like traditional lexical items, are learned pairings of form and function. Grammar does not involve any transformational or derivational component.

Constructionist Approaches - Oxford Handbooks

As Construction Grammarians (for an overview see Hoffmann & Trousdale 2013) argue, FORM-MEANING pairs, i.e. 'constructions', are actually the central unit of human language, and all linguistic levels from morphology over phraseology/idiomaticity to syntax proper can be captured by constructions.

A Construction Grammar Approach to Genre

This dissertation proposes a Construction Grammar account of how the meaning of complex constructions, specifically, analytic causatives, emerges from an aggregation of simpler constructions, which individually have fairly abstract semantics, but which in combination encode very specific event types.

The last decade has seen a rise in popularity in construction-based approaches to grammar. Put simply, the various approaches within the rubric 'construction grammar' all see grammar (morphemes, words, idioms, etc.) as fundamentally constructions -- pairings of form and meaning. This is distinct from formal syntax which sees grammar as a system ...
