A free-electron laser is a synchrotron light source producing extremely brilliant and short pulses of synchrotron radiation. An FEL functions and behaves in many ways like a laser, but instead of using stimulated emission from atomic or molecular excitations, it employs relativistic electrons as a gain medium. Synchrotron radiation is generated as a bunch of electrons passes through a magnetic structure. In an FEL, this radiation is further amplified as the synchrotron radiation ...

Free-electron laser - Wikipedia

Free Space Optical or Laser communications is creating a new communications revolution, that by using visible and infrared light instead of radio waves for data transmission is providing large bandwidth, high data rate, license free spectrum, easy and quick deployability, low mass and less power requirement. China | Laser Weapons - Washington Free Beacon

The AN/SEQ-3 Laser Weapon System or XN-1 LaWS is a laser weapon developed by the United States Navy. The weapon was installed on USS Ponce for field testing in 2014. In December 2014, the United States Navy reported that the LaWS system worked perfectly against low-end asymmetric threats, and that the commander of Ponce is authorized to use the system as a defensive weapon.

AN/SEQ-3 Laser Weapon System - Wikipedia

Modularized fiber lasers, with output power up to 1 kW and capable of being ganged, are currently available commercially. Many other types of low power SSLs are currently in use in such military systems as laser pointers, sensor blinders and deception devices.
