Gather a small sample of hair from a hair brush or pull a few strands to wash and make six test groups, five for the shampoo and one of unwashed hair. Use the same amount of hair, shampoo, water and let each dry for the same amount of time during the experiment. Tie one end of the hair to a ruler and the other a paper clip.

Science Experiments With Shampoo & Conditioner | Sciencing

Shampoo and Conditioner Science Robert Y. Lochhead University of Southern Mississippi Shampoos and conditioners are the highest volume of products sold in personal care. In this chapter, we will consider the science that underpins the functioning of these product types. The principal function of shampoos is to cleanse the hair. However, since the

Chapter 3 Shampoo and Conditioner Science

Sulfates are added to many shampoos to increase their foaming action, but have been shown to have strong potential for irritation to skin and scalp, to strip hair of its natural oils, leaving it dry and brittle, and to cause long-term damage to hair. art naturals sulfate-free products are designed to do just the opposite — and their botanical oils and extracts clean without stripping, drying, or irritating.

Conditioning Agents: Detergents strip away the sebum from your hair, leaving the cuticle exposed and susceptible to damage. If you use soap or dishwashing detergent on your hair, it will get clean, but it may look limp, lacking body and shine. Shampoo contains ingredients that replace the protective coating on the hair. Silicones detangle hair, smooth the hair cuticle and add shine.
