other organisms for nutrients; EATS Decomposer – An organism that breaks down the body of dead plants and animals

Interdependence among Living Systems Review

A biological community of interacting organisms and their physical environment.

Unit 8 Interdependence among living systems Flashcards

...

Within an ecosystem, there are three different categories of organisms: producers, consumers and decomposers. Producers are organisms such as plants and algae that create energy through photosynthesis. Consumers eat other organisms for their energy. Decomposers break down dead plants and animals and return nutrients to the soil.

Interactions in the Ecosystem | Sciencing

interdependence of organisms in the natural world. They understand that all organisms have basic needs that can be satisfied through interactions with living and nonliving things. Students will investigate life cycles of animals and identify likenesses between parents and offspring.

19 TAC Chapter 112, Subchapter A

Interdependence among living organisms and the environment

1.A species is a group of the same kind of organisms with common characteristics. 2.A population refers to a group of organisms of the same species living and reproducing in a defined area. 3.A community is made up of different populations of organisms living together in a habitat.

SCIENCE (FORM 2): Chapter 4

(1.9C)(from Gather evidence of interdependence among living organisms such as energy transfer through food chains and animals using plants for shelter.

We Will / I Will Gather evidence of interdependence among ...

Habitat – the place where an organism lives and has all of its basic needs. Interdependence – the idea that everything in
