Answer key included. Resource comes as both a PDF for printing and a Microsoft Word document for editing or for a digi...

Parts of a Microscope Labeling & Functions Worksheet - Science

This type of microscope uses visible light focused through two lenses, the ocular and the objective, to view a small specimen. Only cells that are thin enough for light to pass through will be visible with a light microscope in a two dimensional image. Another microscope that you will use in lab is a stereoscopic or a dissecting microscope.

Microscope | Biology I Laboratory Manual

The compound light microscope uses two sets of lenses and light to magnify the image of the specimen. Often times, the specimen is stained or dyed; these stains or dyes will bind to cellular structures and absorb light which increase contrast allowing better viewing of the specimen.

Laboratory Exercise: MICROSCOPY I
