I am having some trouble grasping the full understanding of how a macro variables function Suppose the following macro variable was submitted: %LET NewVbl = 10 + 20; Would the value of the NewVbl be 30? I understand how macro variables function if they are a set value (such as %Let NewVbl = 30...

### Creating a Macro variable - SAS Support Communities

Use macro variables to specify variables that satisfy certain characteristics. Some companies might discourage the use of variable lists in production code because automated lists can be volatile. If the number and names of variables in your data sets occasionally change, it is safer to manually list the variables that you are analyzing.
