Lines of longitude and latitude are used to create a ...

Latitude and Longitude are in decimal. I didn't use min() for the asin() call as the distances that I'm using are so small that they don't require it. It gave incorrect answers until I passed in the values in Radians - now it's pretty much the same as the values obtained from Apple's Map app :-) Extra update:

Calculate distance between two latitude-longitude points ...

In PostGIS, for points with latitude and longitude there is geography datatype. To add a column: alter table your_table add column geog geography; To insert data: insert into your_table (geog) values ('SRID=4326;POINT(longitude latitude)'); 4326 is Spatial Reference ID that says it's data in degrees longitude and latitude, same as in GPS.

Louisiana was inhabited by Native Americans for many millennia before the arrival of Europeans in the 16th century. During the Middle Archaic period, Louisiana was the site of the earliest mound complex in North America and one of the earliest dated, complex constructions in the Americas, the Watson Brake site near present-day Monroe. An 11-mound complex, it was built about 5400 BP (3500 BC).
