However, these starters do not have LVP (low voltage protection) i.e. it does not break the circuit upon power failure. It can be dangerous for some applications because the motor restarts when the power is restored. Thus they are used for a low power motor. Direct On-Line (DOL) starter is a manual starter that provides overload protection.

What is Motor Starter? Types of Motor Starters ...

Manual motor starters, also known as motor protection circuit breakers (MPCBs) or manual motor protectors (MMPs), are electromechanical protection devices for the main circuit. They are mainly used to switch motors ON/OFF manually and to provide fuseless protection against short-circuit, overload and phase failures.
